

EMAIL THREAT FORENSIC INVESTIGATION REPORT

OFFICIAL DIGITAL FORENSIC EXAMINATION DOSSIER // LAW ENFORCEMENT & SOC RECORD

Case Identifier	Examination Date	Investigation Status	Evidence Hash (SHA-256)
CASE-006	2026-09-05	VERIFIED EXAMINATION	8c2a7f4e1d9b0536f8c4a0e7b3d1...
Classification: PHISHING	Risk Score: 76 / 100	Sample: Microsoft365_Pass...	File Size: 67 KB

1.0 EXECUTIVE SUMMARY

A forensic examination was conducted on evidence sample 'Microsoft365_Password_Expires_Today.eml' cataloged under reference CASE-006. The electronic message claims transmission from sender 'Microsoft 365 Helpdesk' (noreply@microsoft-verify.net). Automated and deterministic protocol evaluation assessed an authoritative risk score of 76 out of 100, resulting in a forensic threat classification of PHISHING. Authentication protocol verification recorded SPF: FAIL, DKIM: NONE, and DMARC: FAIL. The message was accompanied by an identified lookalike typosquat target domain (microsoft.com), indicating intentional brand impersonation. Routing telemetry analyzed 3 relay hops from origin to terminal destination server.

2.0 EMAIL & EVIDENCE SPECIFICATIONS

Evidence Field	Forensic Data Value	Verification Finding
Original Filename	Microsoft365_Password_Expires_Today.eml	Binary structure parsed and pres...
File Size	67 KB	Standard envelope size
Cryptographic Hash	8c2a7f4e1d9b0536f8c4a0e7b3d1f5a9c6e2b8d4f0a7c3e...	SHA-256 cryptographic integrity ...
Claimed Sender Name	Microsoft 365 Helpdesk	Header-extracted display name
Claimed Sender Email	noreply@microsoft-verify.net	Header From address
Terminal Mail Server	Mumbai, India	Terminal destination host
Originating Node	91.219.237.44	First recorded external IP hop

3.0 AUTHENTICATION PROTOCOL ANALYSIS

Standard email authentication protocols were checked against published Domain Name System (DNS) records. Discrepancies indicate that the sending infrastructure was not authorized to transmit on behalf of the domain.

Protocol	Verdict	Technical Examination Finding
SPF (Sender Policy Framework)	FAIL	Authorized host check: Sending server IP is not listed in domain ...
DKIM (DomainKeys Identified)	NONE	No DKIM signature found in message header
DMARC (Domain Alignment)	FAIL	Domain alignment policy check: Failed alignment criteria with pub...

4.0 HEADER & ROUTING INFRASTRUCTURE

The message envelope traversed 3 recorded network transit hops. Network infrastructure was cross-referenced with autonomous system records and datacenter threat feeds.

Hop	IP Address	Geographic Location	Relay Timestamp	Forensic Infrastructure Note
#1	91.219.237.44	Kyiv, Ukraine	2026-09-06 04:10:02	Hosting ASN with prior phishing re...
#2	5.9.12.88	Frankfurt, Germany	2026-09-06 04:10:25	Hetzner transit
#3	52.98.88.16	Mumbai, India	2026-09-06 04:10:59	Destination mail server

5.0 LANGUAGE, INTENT & CONTENT ANALYSIS

Content linguistics and social engineering vectors were scored at 25 out of 30 maximum allocated points. Extracted textual phrases were analyzed for deception patterns, urgency cues, and financial solicitation.

Category / Signal	Detected Phrasing / Pattern	Confidence Assessment
URGENCY	"your Microsoft 365 password expires today"	95.0% Match
CREDENTIAL REQUEST	"keep your current password by verifying below"	91.0% Match

6.0 REPUTATION & DOMAIN INTELLIGENCE

Attribute	Observed Evidence	Analyst Interpretation
Domain Age	6 days	High anomaly: Domain registered immediately pr...
Typosquatting Target	microsoft.com	Deliberate brand impersonation targeting legit...
Reputation Score Contribution	12 / 15 pts	Elevated risk: Associated infrastructure flagg...

7.0 INDICATORS OF COMPROMISE (IOCs)

The following actionable technical indicators were extracted during examination for perimeter blocklisting and SIEM correlation:

Indicator Type	Technical Value	Context / Threat Finding
IP Address (Origin)	91.219.237.44	Originating relay host observed in he...
Email Address	noreply@microsoft-verify.net	Header From address
Typosquat Target	microsoft.com	Target brand impersonated in attack
Forensic Artifact	URL:https://microsoft-verify.net/reset	Extracted payment/URL artifact
File Hash (SHA-256)	8c2a7f4e1d9b0536f8c4a0e7b3d1f5a9c6e2b8d4f0a7c...	Unique cryptographic hash of message ...

8.0 ATTRIBUTION ASSESSMENT

ATTRIBUTION FINDING: LIKELY SPOOFED DOMAIN IMPERSONATING MICROSOFT.COM

Authentication failures combined with a detected lookalike domain registration establish clear domain spoofing.
Note: Attribution conclusions represent technical forensic assessments based on available telemetry and do not constitute definitive legal identification without formal judicial subpoena records.

9.0 CORRELATION & INFRASTRUCTURE RELATIONSHIPS

Graph analysis cross-referenced entities across historical telemetry clusters and previous incident dossiers:

Source Entity	Target Entity	Correlation Basis / Linkage
email1	domain1	credential harvest landing page
email2	domain1	same campaign domain
domain1	ip1	hosted on sending IP

10.0 RISK ASSESSMENT & SIGNAL WEIGHTING

Overall Risk Score: 76 / 100 (Threshold evaluation: HIGH RISK). The score is derived across four standardized examination quadrants:

Quadrant Vector	Allocated Weight	Observed Score	Analytical Contribution
Header & Routing	30 pts	18 pts	Evaluates relay anomaly, ASN hosting, and h...
Authentication Failure	25 pts	21 pts	Evaluates SPF, DKIM signature validity, and...
Language & Intent	30 pts	25 pts	Evaluates urgency, financial diversion, and...
Reputation & History	15 pts	12 pts	Evaluates domain age, typosquatting targets...

11.0 KEY INVESTIGATION FINDINGS

- High-confidence threat signature: Overall threat score exceeds enterprise containment threshold.
- Message failed authentication verification: Sending host lacks authoritative domain alignment.
- Lookalike brand impersonation identified: Attacker targeted legitimate entity 'microsoft.com'.
- Origin routing: Outbound transmission originated from standard commercial/workspace relay.

12.0 RECOMMENDED INVESTIGATION ACTIONS

- Evidence Preservation: Retain full raw RFC 5322 message headers and message body in forensic storage.
- Network Containment: Implement perimeter firewall block on originating IP 91.219.237.44.
- DNS Mitigation: Issue internal DNS sinkhole rule for identified typosquatting target microsoft.com.
- Incident Response: Query mail gateway logs for all inbound messages matching the sending domain within past 30 days.
- Account Safeguards: Enforce credential reset and session termination for any recipient who engaged with message content.

13.0 AUTOMATED NARRATIVE GENERATION ARCHITECTURE NOTE

SYSTEM NOTICE: This document was produced via deterministic evidence extraction from validated email forensic JSON. The

platform architecture is designed to integrate text-generation language models in future backend iterations to draft extended contextual DFIR narratives while maintaining the underlying JSON as the single source of truth.

14.0 EVIDENCE ATTESTATION & LEGAL DISCLAIMER

REPORT IDENTIFIER: REP-CASE-006 | PLATFORM: Email Threat Intelligence & Forensic Platform | EVIDENCE SOURCE: Ingested MIME/MSG Artifact | STATUS: VERIFIED FORENSIC RECORD

LEGAL DISCLAIMER: This document is an analytical examination record compiled from electronic message headers, cryptographic authentication tokens, DNS telemetry, and network routing hops. Findings should be corroborated with original raw headers, provider server logs, and judicial legal process before presentation in legal proceedings.
